SmarTone

\* Please get in touch with us for more Enterprise-related compatibilities. This is just a small subset. We have more devices and more solutions compatibility available.

Ruggear has been designing and producing smart rugged devices for more than twelve years. As one of the few companies in the world with complete control over its supply chain, Ruggear offers the broadest product range in the Rugged industry. RugGear phones are built to survive your work environment. The reality shows that many phones are not. In fact, research by Telecompaper shows that using your personal phone on your job doubles the probability for damage. RugGear phones are designed to withstand drops on hard surface, submission under water for considerable time and exposure to dust and shocks, so there is no need to take it easy when you are at work. RugGear runs its own factories and its own software development. This is why many Fortune 500 companies and Mobile Network Operators partner with us.

We are certified with many PTT (Push-to-talk) solution providers on our devices. We are also a listed Android Enterprise Partner and support Zero Touch Enrollment on some of our rugged smart phones. Please do not hesitate to get in touch with us for any specific requirement
