

CAPESTONE PRIVATE 4G/5G NETWORKS

Distributor and service provider of Private 4G/5G Networks

Critical business processes are increasingly dependent on mobile communications. This includes a network or service, which supports all business processes with very high performance - such as availability and reliability. A private 4G/5G network for mobile communications is entirely under your own control and can therefore be designed for guaranteed performance.

As a value added distributor and service provider in Europe, Capestone can now offer its 1,000-plus EMEA channel partners a private 4G/5G network solution. Capestone can build a private 4G/5G network as a company property but it is also possible to purchase the mobile service as-a-Service. Capestone will then manage and even finance the network.

WHY BUY YOUR PRIVATE 4G/5G NETWORK FROM CAPESTONE?
